

# Miniature Lighthouse

## Supplies:

- 2 plastic cups (1 red cup; 1 smaller clear cup)
- 1 battery-operated tea light or foil
- White and black paper
- Glue or tape
- Scissors
- Decorative tape and markers, if desired

## Directions:

1. Cut out strips of white construction paper about an inch wide and wrap them around the upside-down red cup to make stripes. Attach the pieces with glue or tape.
2. Cut out black squares of construction paper and attach them to the red cup for windows and a door. You could also use decorative tape, or decorate the cup however you like.
3. Turn on the tea light and set it on top of the upturned end of the red cup. You can create a shiny flame out of foil if you don't have a tea light and attach it to the cup.
4. Cut out a circle of black construction paper to fit onto the bottom of the clear cup and glue the paper on to the cup.
5. Place the clear cup, upside down, over top of the bigger cup, and let your light shine. You can use your lighthouse as a night light and switch it on and off as often you like by removing the clear cup to access the light switch.
