

Suggested Safety Requirements

For Building Sites

1. Maintain area around construction site free of debris, place debris in a container or corral.
2. Keep ground surface around construction site level.
3. Any ramp up to an entrance will not be placed over a hole and must be a minimum of 24 inches wide and no higher than 36 inches high.
4. A stable walkway to be provided if there is an extreme mud condition. It must start at the street and end at the entrance to the job site.
5. Install a fixed barrier around any open holes where there is a fall hazard.
6. Keep street area clean & accessible.
7. Keep interior of job site clean & accessible.
